The holder is made of polyether imido system resin, polyimide system resin and polyamide imido system resin.

A lubricant is coated uniformly on surface of holder body such that the film thickness of lubricant layer is 0.001-25 micrometer.

ADVANTAGE - Reduces torque of bearing. Reduces torque variation.

Reduces agitation resistance. Improves life of bearing. Improves self lubrication property. Ensures heat resistance and chemical resistance nature. Reduces deformation rate of bearing, even at high temperature.
